Training for Effective School Administrators

Development programs for educational leaders should include study of management functions, leader behavior, and instructional leadership skills.

GORDON CAWELTI

Few social institutions could withstand the pressures faced by schools over the last decade. The mix of accountability laws, competency tests, mandates for equity and a more responsive curriculum, declining enrollments, lid bills on financing, and collective bargaining have placed demands on school administrators for skills unheard of several years ago, much less taught in universities.

As a result improved university preparation programs and more effective Human Resource Development (HRD) for practicing administrators are more important than ever. We must now think through what the curriculum for school administrators should be and what pedagogy (or andragogy) will best assist administrators to better cope if not lead.

The Educator’s Response

Educational leaders have responded to outside pressures with a heavy press for a management approach to running schools or “systems” thinking and all that goes with such efforts for efficiency and effectiveness. Precise goals in both short- and long-range planning, closer teacher supervision, criterion-referenced testing, and tougher performance evaluation now characterize life in many districts. This mystique of “management” continues, even though the concept is not well understood by many of its admirers, and school administrators have rarely been trained to Plan, Organize, Direct, and Control.

The Administrator’s Perception of the Problem

Where does all this leave the practicing school administrator? Slightly bewildered...

Gordon Cawelti is Executive Director of the Association for Supervision and Curriculum Development, Alexandria, Virginia.
dered and ready for early retirement.

If one examines rationally the sources of bewilderment—accountability, competency testing, mandated curriculum, negotiation, and shrinking revenues—one can derive a set of skills very much needed by the contemporary school administrator:

- Skill at building consensus among diverse viewpoints
- Skill at flexible programming to accommodate a variety of student needs
- Confidence in instructional improvement strategies that offer hope of getting results
- Organization development skills—relieving the pathology almost all organizations have
- Improved management skills.

The partial list doesn't look at all like the needs perceived by school administrators. During the past five years, I've opened dozens of leadership training workshops by asking principals and other leaders to write in a sentence or two what they see as their biggest leadership problems. Expressed in their own words, their list looks like this:

- Motivating teachers to accept new ideas (always number 1)
- Organizing my time, time management
- Communication (whatever that may be)
- Getting things accomplished without authority to do so
- Being too directive, asserting my views too strongly
- Involving others in decisions
- Too many forms to fill out, central office paperwork
- Discipline.

And the list goes on. In a typical group of principals, about 90 percent of the topics cited are people problems (or those of relationship behaviors in leadership training lingo). The following account for only about 10 percent of such spontaneously reported perceptions of leadership problems:

- No sense of direction in our district
- No priorities have been established
- Everyone pulls in different directions.

These comments, of course, reflect goal problems or those dealing with task behaviors. Rarely does a school leader mention improving productivity; improving achievement, reducing dropouts, improving school climate, or motivating student interest in important societal issues.

The dilemma early recognized by people who train school administrators is how much to focus on perceived needs of administrators vs. the needs perceived by someone else, such as productivity. HRD programs that are well received deal with both, quite obviously, but what then is the substance of a curriculum that will have a tangible and positive effect on students, administrators, and teachers?

A Proposed HRD Program for Administrators

A comprehensive HRD program for potential or practicing school administrators entails four major components, requires substantial time, and must be a sustained effort. The four components are:

1. Training in Leader Behavior
   Leaders are expected to lead, to provide a sense of direction, to motivate others toward attainment of goals, and to build consensus. We need to help people become sensitive to style flexibility, alternative models of leader behavior, and what they imply for practitioners.

   Typically, training programs take people through conceptualizations of leader behavior, such as the Ohio State model, and the work of Fiedler, Likert, Blake and Mouton, and Hersey and Blanchard. I've done this for some time, but more recently I've given increased attention to the relationship behaviors (people aspects) of leadership. The education community is beginning to show interest in the concept of productivity (quality circles, for example), the Quality of Work Life (General Motors), and is occasionally applying McClelland's important work at Harvard on how to motivate people. Herzberg's work is necessary but insufficient; to use Theory X and Theory Y, one must know Theory Z.

   Interest in trait theory is surfacing again. One researcher concluded that good schools result when the principal has vision, resourcefulness, and high leadership skill. I would add the ability to "size up" the school's needs and a "can do" attitude, but these traits are tough to measure.

   The National Association of Secondary School Principals' work in adapting industry's assessment center idea is a significant venture into better identification of persons capable of educational leadership. The current refinement of the assessment center may be a useful resource to school districts since the people operating these centers are developing training experiences designed to strengthen traits known to be related to effective leadership.

   Useful HRD experiences can range from an intensive workshop on leadership style to an informal seminar discussing James McGregor Burns' book, Leadership. Efforts should be made to stimulate a lifelong interest in continuing one's professional development in the study of leader behavior.

   2. Training in Management Skills

   The management approach to leading an institution is, very simply, a disciplined way of looking at one's job that helps
put leader behavior knowledge into perspective. I’m always amazed when principals debate whether they should be “managers” or “instructional leaders.” In pushing these discussions a little, I often find that those who advocate the “manager” role really don’t mean management in the sense of its classic functions. Instead, they are referring to operations—a maintenance role in handling logistics, schedule, policy interpretation, and so on. An “operations role” is not leadership any more than a management role is. Leadership implies providing a vision or sense of direction.

The classic management functions are:
- **Planning**—requires training in formalized systems ranging from a relatively simple but useful Gantt chart to the much more complex Program Evaluation and Review Technique (PERT) and other Critical Path Methods (CPM). Improving skills in forecasting, establishing short- and long-term goals, and implementing an MBO approach are appropriate topics as are budgeting and policy making.
- **Organizing**—refers to the grouping of activities or functions necessary to accomplish goals and plans and assignment of authority and coordination. Drucker suggested that organizational structure can be determined by activities analysis, decision analysis, and relations analysis. Clarifying roles through job descriptions, studying issues of span of control, delegation, and other topics will help the administrator see more clearly his or her responsibility for the organizing function. Considering alternative roles for the assistant principal is a central issue. Most schools are organized the way they were last year rather than according to a structure that has been determined most likely to help attain the school’s goals. Although some scholars classify it separately, selecting staff can also be subsumed within the organizing function.
- **Directing** (motivating)—refers to the manager’s responsibility to operate, coordinate, “trouble shoot,” and generally motivate employees to accomplish the goals of the organization. (While the training in leader behavior discussed earlier could be included here, I’ve given it separate status because of its importance.) Leaders spend most of their time and often are least effective in this function. Topics for HRD programs here can include communication techniques, how to motivate teachers, conflict resolution techniques, and job enrichment approaches.
- **Controlling**—involves (1) establishing standards, (2) measuring performances against these standards, and (3) reallocating resources to correct deviations from standards or plans (for example, adding a reading clinician to a school where achievement is well below grade level expectations). The discerning reader will note the similarity of the control function to Bloom’s mastery learning model. HRD training would include work on teacher performance evaluation, developing systems for obtaining periodic data on achievement, and getting feedback on teacher morale or the leader’s style. Some districts have developed Management Information Systems (MIS) to perfect these control systems. The program with the control function is controlling it, not asking for too much data.

Many examples of abuses of the management approach exist, particularly in the business community where preoccupation with profits has distorted values and created inhumane working environments.

The person sensitive to leader behavior issues will resist temptation to attain “goals at all costs.” An early source of management instruction was the university business school, but more and more
educational administration professors have specialized in some of these functions.

3. Training in Instructional Leadership. The third component recommended for administrator HRD activities lies in the areas of skills and processes used to improve instruction. If a principal or superintendent is to be remembered as an instructional leader after five years in a school, what kinds of leadership activities will be given priority? I contend that the four major instructional improvement processes used by schools to help teachers are:

- **Curriculum development**—assessing needs, selecting goals and objectives, selecting and organizing content and learning activities, and evaluating the curriculum. Training experiences are available in all of these areas and must be provided to raise the confidence level of school administrators if they are to feel comfortable in doing curriculum work.

- **Clinical supervision**—improving skills in this well-developed sequence which includes a pre-observation conference, observation and data collection as per a "contract" with the teacher, careful data analysis and conference preparation, a follow-up conference, and a post-conference analysis. Skilled trainers in clinical supervision can help principals acquire this skill to the point that teachers will regard it as a valuable opportunity for professional growth.

- **Staff development**—training in helping principals realize the potential of HRD activities, alternative resources for providing staff development, knowing principles of adult learning and the necessity for experiential approaches, and giving teachers opportunities to observe other teachers.

- **Teacher evaluation**—since the primary purpose is improvement, the process should focus on factors related to effective teaching, or on issues perceived by teachers themselves as weaknesses. The reliability of persons evaluating teachers can be improved by training and much can be done to reduce teacher dissatisfaction with this required supervisory activity.

The instructional leadership component is essential if we are to help increase the productivity of principals in school improvement. An ASCD study investigated perceptions held by teachers, supervisors, principals, and superintendents of the extent to which these four instructional improvement services are provided to teachers when needed. Typically only about a fourth or a third of any of the reference groups rated the adequacy of services favorably, but the reference groups farthest from teachers tended to rate instructional services more favorably. We clearly have a long way to go in improving the instructional services suggested in this model. Studies by Bruce Howell at the University of Tulsa suggest that principals often spend only 25 percent of their time engaged in the four components. Most of their time is spent on operational duties, including forms and reports, discipline and parental involvement, and other noninstructional functions. Very few principals report spending up to 50 percent of their time improving instruction.

The reasons for this situation are numerous. The principals' level of confidence in instructional matters is not high and they are commonly rewarded more for a "tight ship" than for a good science or art program.

4. Traditional (Generic) Administration Course Topics. In the past, many university preparation programs or in-service workshops focused on topics such as school finance, theory, law, and personnel. More recently topics such as collective bargaining, public relations, educational technology, and community 

"An 'operations role' is not leadership any more than a management role is. Leadership implies providing a vision or sense of direction."
involvement have become necessary to
the success of today's school leaders.
While these topics continue to be import-
ant, one can argue that a different em-
phasis may be needed.

**Toward Effective Administrators**

A growing body of research shows a
positive relationship between the leader-
ship ability of principals and student
growth in basic skill achievement. Schol-
ars such as Brookover, Edmonds, and Lezotte have much evidence to sup-
port this common sense proposition.
Accordingly, if principals can improve
their skills and if their leadership efforts
focus on the characteristics of effective
teaching, one can anticipate more suc-
cessful schools and a reduction in politi-
cal moves to legislate learning, which,
as Goodlad has suggested, offer little
hope for real school improvement. See
Figure 1 for teacher effectiveness/
school effectiveness characteristics.

**Summary**

Figure 2 shows the four components of
a comprehensive HRD program for
school administrators which I believe
can train people to have confidence that
they can improve schools. Some topics
are missing—change strategies or how
bureaucracies work, for instance. We
can't do everything; even these four
components present substantial curricu-
lum problems.

In considering the redesign of HRD
and administrator preparation programs,
I believe these observations can be
made:

- One immediately faces the classic
curriculum problem of selection: there
is too much to teach in a limited amount
of time.
- We know precious little about the
effectiveness of alternative strategies
such as lecture, training experiences,
simulation, use of technology, and in-
ternships except that on the whole, the
yield of HRD programs hasn't been
high. How much instructional time is
enough?
- Very little thinking has been done
at the national or state level on system-
atic approaches to training people to be
more effective administrators.
- The selection process has a great
deal to do with producing effective lead-
ers. Highly selective institutions clearly
have a head start.
- With more to teach, and with such
high variation in backgrounds of per-
sons in graduate programs or HRD
workshops, more must be done in prior
assessment, use of instructional technol-
ogy, self-study, and other ways of im-

proving the efficiency of our efforts.

- We need more focus on the rudiments that lead to effective schools both in the areas of basic skills and knowledge of content and teaching strategy issues in various subject fields. More focus on instructional improvement is needed.

I would, of course, like to see educators who are intellectual leaders in a community—people comfortable with ideas and a zest for new knowledge. I hope there will be time left in the graduate experience or HRD workshop for the liberal arts faculty to help produce visionary leaders who are capable of thinking about the nature of the good life in the 21st century.

Schools need revitalization as much as does American industry. William Ouchi's Theory Z is replacing McGregor’s Theory X and Y as more significant in raising productivity. Theory Z is simply a special way of managing people that has worked with the Japanese and its emergence symbolizes the changing curriculum for educating school leaders. It is significant that the participative and humanistic elements of Theory Z organizations are being adopted now by "hard-nosed management" types who desperately seek improved productivity. We clearly are seeing in this emergence the importance of Rensis Likert's work two decades ago in describing System Four organizations where all factors mesh in supporting efforts to attain an organization's goals.

See, for example, the October 1979 issue of Educational Leadership which carries several articles on both school and teacher effectiveness research. See also Lawrence Lezotte, and others, School Learning Climate and Student Achievement (Ann Arbor: Institute for Research on Teaching, University of Michigan, 1980), 158 pp.

The Classroom Organizer
a new active system for enrichment, testing, practice, and reinforcement

IT'S PART OF
HOLT MATHEMATICS
... IT'S NEW

Here is a total resource package with everything you need to motivate and enrich the teaching of Holt Mathematics in one, convenient package! Makes planning and teaching easier by putting an unprecedented variety of resources at your fingertips. Colorfully organized, especially created materials for critical learning areas are all designed to help students gain true mastery of mathematics.

There's much more, so, before you decide
